

HOW TO READ A WATER METER

The digital reading in the right hand square indicates that currently, 2 cubic metres of liquid have passed through the water meter

The right hand dial with the arrow pointing at '2', indicates that a further 200 litres of liquid have passed through the water meter

From the next dial indicator reading clockwise with the arrow pointing at '9' indicates that a further 9 litres of liquid has passed through the water meter

The last dial with the arrow pointing at '6' indicates that 0.6 litres need to be added to the final volumetric reading of the water meter

So the final reading of liquid used according to the readings on the water meter is:

2.2396 cubic meters
